MANAGE YOUR MEDIA ASSETS EFFICIENTLY TODAY

With D.Asset you can increase efficiency and save time and money within your organization.

INCREASE EFFICIENCY

- Monitoring activities related to your assets has never been easier. The intuitive interface allows you to monitor the status of your most important processes at any time.
- You can turn on creation of thumbnails and proxy files for asset, as well as calculating loudness, which will later make it easier for you to manipulate and edit the asset.
- There is also a list of the last ingested assets, as well as a list of assets which are ready-to-delete, and this makes everything easy to control. Additional monitoring of processes within the system is also possible by checking assets that are being exported to social media or transcoded.

MANAGE USERS

- System administrators are there to manage system users and help the whole system function efficiently.
- It is important that each user knows their role exactly, therefore D.Asset allows defining privileges for each individual user. Privileges are granted when adding users to the system, but they may be modified later if the user gets different assignments.
- In addition to basic user information, you can also see the time when they last logged in, and whether the user is currently active or not.

SCANNING MEDIA ASSETS

D.Asset is a standalone application that scans and monitors “Watch folders”.

AUTOMATIC SCANNING OF YOUR MEDIA ASSETS

- D.Asset uses “watch folder” mechanism - monitoring and automatic archiving of the folder’s contents. It automatically scans your predefined MEDIA folder. This means that all the files you want to be found and visible must be in that folder, otherwise they won’t be visible while scanning.
- All of your assets that are not in a predefined MEDIA folder may also be visible during the scanning process, but in that case you need to specify the path to a file located elsewhere and place it in a predefined folder.

MANUAL SCANNING OF YOUR MEDIA ASSETS

- If for some reason you cannot find a particular asset, there is also a manual scan option. This way you can make sure that all contents are accessible to system users at all times. You can also adjust the time interval so that the scanning process is done every few minutes, hours, or as often as you like.

SYSTEM REQUIREMENTS

Windows 10 OS(32 or 64 bits)
Intel® Core™ i3 Processor or better
2 BG RAM

QUALITY CONTROL

- It is very important that the content you use for broadcast meets certain quality standards. Since different standards may apply to different types of programs (shows), you have the ability to create multiple different quality control profiles.
- Within each profile you have the ability to define the values of the parameters that the asset must have - video or audio bitrate, horizontal and vertical resolution, volume, duration, etc.
- When setting up quality control, selecting W or D option determines whether an asset that has not passed quality control can be broadcasted from the rundown list or not.

RECORDING AND STREAMING PROFILES

- Some of the applications from the Dovecher.tv platform offer you the ability to record and stream content that is being broadcasted. D.Asset is there to ensure that these options can be used quickly and easily.
- Creating profiles for recording and streaming can simply be done thanks to the easy-to-use interface. After you have successfully set all required profiles, they will appear in the list of available profiles and you can select them in one of our applications.

SUPPORTED FORMATS

- VIDEO

.mov	.mp4	.flv
.avi	.mxf	.gxf
.mpeg	.mts	
- IMAGE

.bmp	.jpg	.jpeg
.png	.tga	.pdf
- AUDIO

.wav	.mp3

We provide our clients with 24/7/365 direct support through all communication channels.

ABOUT US

Our clients and we think alike. We use our solutions on a daily basis and we find ways to simplify the job and to make sure that, at the end of a day, the outcome of the work of all employees in television is better.

We are in constant contact with customers and based on their demands, we constantly innovate. Having a year to year growth and learning together with our customers from all around the world is a personal pleasure. We accept their proposals, adapt to their concept and we love the challenges. We are ready to customize our solutions to the specific needs of each of our customers.

Teamwork is one of the main forces of our organization and that is why our solutions tend to be a result of collaboration and synergy.

Today, Dovecher.tv is recognized as the only domestic, 100% Serbian brand and company that produces complete software solutions for the automation of large, but also medium-sized television stations.

Our solutions increase efficiency in work, reduce the cost of program production, increase earnings and minimize the risk of broadcasting errors. All our individual solutions can work completely independently, but also as a single entity, which in this case results in a drastic increase in efficiency.
