D.LIVE

PROFESSIONAL PRODUCTION OF ANY EVENT

D.Live provides all the tools necessary for live production: video playback control, 8 input signals, graphic elements and integration with the **Dovecher.tv News Room** system.

COMPUTER GRAPHIC (CG)

- Multi-layer graphics and the ability to customize the visual identity are a great advantage, and the "smart" display of individual CG elements only further facilitates the work. Graphic elements can appear automatically or you can display them manually when needed.

PROFESSIONAL HD PRODUCTION

- Connect multiple inputs (physical (SDI) or IP streams) and create without restrictions because switching from one source to another requires just a mouse click. Broadcast up to 1080p with the highest quality h.264 / AAC with encoding in a crystal clear image.

SIMULTANEOUS STREAMING, RECORDING AND OUTPUT

- By using the D.Live software, you get the ability to simultaneously broadcast, record and stream content, as well as make backups. All these operations start at the same time with just one click, so there is no delay caused by manual start.
- In addition to recording the main output, you can choose to record different version of the broadcasted show - "clean" feed without graphic elements for later reuse or to record one of the individual inputs.
- Direct streaming to Facebook page or CDN of your choice can also be started at the same time as the broadcast, and the audience will thank you for the multiple ways to follow the content.

D.LIVE

Size: 23

POSSIBILITY FOR SYSTEM EXPANSION.

Integration with other solutions from Dovecher.tv platform provides the opportunity to improve the work flow, but also leaves room for later expansions in order to increase safety and efficiency.

INTEGRATION WITH DOVECHER.TV NEWS ROOM

- Make the connection between the journalist and the live production operators in the easiest way possible - use D.Live and News Room as a complete NRCS solution.
- Rundown list created in the News Room is automatically displayed in D.Live, as well as any subsequent changes - even those changes made at the last minute.
- However, the biggest advantage of this way of working are the lower thirds - each journalist can create lower thirds for his story in the News Room software (with information about the person and time of appearance), and it will be displayed during broadcasting in D.Live with the visual identity of the show within which it is broadcasted.

INTEGRATION WITH PROMPTER

- Editing the prompter text on the spot allows last-minute changes - you can correct the detected error, change the schedule of announcements or add a new news announcement so that the presenter can read it.

INTEGRATION WITH PLAYOUT

- In D.Live, you can quickly and easily write text that will be displayed as a lower third, live inserter, phone call information in the program, the latest news, etc.
- D.Live is a very efficient software itself, but additional features are in the first plan when paired with D.Play (playout) software - you can choose the option to wait for the command to start, but also for command to end the live broadcast.

D.LIVE

MULTIPLE OPPORTUNITIES AND BENEFITS

D.Live is more than a software - our solution can replace a complete professional live production control room.

Control video and audio inputs, use content from the list, play graphics automatically or manually, record shows and much more in one solution.

BUILT-IN AUDIO MIXER

- Do you want the video image to go from one input and the sound from another input? In D.live you can choose the variant that suits you, using the built-in audio mixer.
- Amplify, reduce or mutate the audio of each input individually, for live broadcasting.
- Audio AUX input

SCENES

- Design and create your own scenes using a variety of sources.
- You can create an unlimited number of scenes, of different sizes, with different content in each.

MULTI VIEW

- Pre-control of input signals by using multiple preview windows. Using multi view increases the control of broadcasted content, reduces the possibility of errors and improves the production of shows.
- In addition to the standard main output display, you can also preview 4 input signals. If you want to display everything in one place - it is possible to display all 8 inputs, preview and out windows at the same time.

ABOUT US

We provide our clients with 24/7/365 direct support through all communication channels.

Our clients and we think alike. We use our solutions on a daily basis and we find ways to simplify the job and to make sure that, at the end of a day, the outcome of the work of all employees in television is better.

We are in constant contact with customers and based on their demands, we constantly innovate. Having a year to year growth and learning together with our customers from all around the world is a personal pleasure.

We accept their proposals, adapt to their concept and we love the challenges. We are ready to customize our solutions to the specific needs of each of our customers.

Teamwork is one of the main forces of our organization and that is why our solutions tend to be a result of collaboration and synergy.

Today, Dovecher.tv is recognized as the only domestic, 100% Serbian brand and company that produces complete software solutions for the automation of large, but also medium-sized television stations.

Our solutions increase efficiency in work, reduce the cost of program production, increase earnings and minimize the risk of broadcasting errors. All our individual solutions can work completely independently, but also as a single entity, which in this case results in a drastic increase in efficiency.
